                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Database
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Total number of hits satisfying chosen parameters:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Searched:
                                                                                                                                                                                                                                                                                                                                                         Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

RA; promoter.

Human cytochrome P450RAI protein. 07-JUL-1998 (first entry)

Identifying DNA encoding inducible or suppressible cytochrome P450 - by screening for drugs which reduce the catabolism of retinoic acid, useful in cancer chemotherapy and the treatment of acne and

The retinoid-regulated genes such as the inducible cytochrome P450RAI gene specifically metabolises a derivative of the RA. The cytochrome P450 gene in general produces enzymes involved in the oxidative metabolism of endogenous and exogenous compounds. The cytochrome P450 nucleotide sequence can be used to induce or suppress the expression of its protein. P450RAI is highly induced by RA in cell lines and tissues. This allows for development of a drug screen using promoters and nucleotide sequences to identify drugs which are useful for reducing the catabolism of RA.

                                                                                                                                                                                                                                                                                                                                                      CC This protein comprises a novel human retinoid metabolising protein, CC designated hp450RAI. Its amino acid sequence was deduced from a CC cDNA clone (see AAV12204) isolated from a retinoic acid-treated MT2 CC cell library. It includes a haem-binding motif characteristic of CC cytochrome P450 proteins. hp450RAI is a retinoid oxidase that has CC the ability to hydroxylate retinoic acid at the 4 position of the beta-ionone ring, and is inducible in epithelial cells exposed to CC retinoic acid. Zebrafish, human and mouse P450RAIs (see AAW44159-61) CC are claimed. They can be expressed in host cells and used to CC metabolize retinoic acid in an organism or cell, in drug screening, and to raise antibodies useful for inhibiting retinoic acid hydroxylation for the treatment of cancer, actinic keratosis, oral CC leukapiakia, secondary tumours of the head and/or neck, non-small CC leukaemia, skin cancer, and premalignancy associated with actinic cycle in the cancer, sach prompelocytic contents of the cancer and premalignancy associated with actinic cycle in the cancer, psoriasis and/or ichthyosis.

                                                          This amino acid sequence is of an isoform of cytochrome zP450RAI. Its expression is dependent on the presence of retinoic acid (RA). The retinoid-regulated genes such as the inducible cytochrome P450RAI gene specifically metabolises a derivative of the RA. The cytochrome P450 gene in general produces enzymes involved in the oxidative metabolism of endogenous and exogenous compounds. The cytochrome P450 nucleotide sequence can be used to induce or suppress the expression of its protein. P450RAI is highly induced by RA in cell lines and tissues. This allows for development of a drug screen using promoters and nucleotide sequences to identify drugs which are useful for reducing the catabolism of RA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This protein comprises a novel mouse retinoid metabolising protein, C designated mp450RAI. Its amino acid sequence was deduced from a C cDNA.clone (see AAV12205) isolated from a retinoic acid-treated p19 teratocarcinoma library. It includes a haem-binding motif c characteristic of cytochrome p450 proteins. mp450RAI is a retinoid coxidase that has the ability to hydroxylate retinoic acid at the 4 cosition of the beta-ionone ring, and is inducible in epithelial cells exposed to retinoic acid. Zebrafish, human and mouse p450RAIs cand used to metabolize retinoic acid in an organism or cell, in drug screening, and to raise antibodies useful for inhibiting retinoic acid hydroxylation for the treatment of cancer, actinic keratosis, coral leukoplakia, secondary tumours of the head and/or neck, non-small cell lung carcinomas, basal cell carcinomas, acute promyelocytic leukaemia, skin cancer, and premalignancy associated with actinic keratosis, acne, psoriasis and/or ichthyosis.

Its expression is dependent on the presence of retinoic acid (RA). The retinoid-regulated genes such as the inducible cytochrome P450RAI gene specifically metabolises a derivative of the RA. The cytochrome P450 gene in general produces enzymes involved in the oxidative metabolism of endogenous and exogenous compounds. The cytochrome P450 nucleotide sequence can be used to induce or suppress the expression of its protein. P450RAI is highly induced by RA in cell lines and tissues. This allows for development of a drug screen using promoters and nucleotide sequences to identify drugs which are useful for reducing the catabolism of RA.

                                    retinoic acid. Zebrafish, human and mouse P450RAIs (see AAW44159-6 are claimed. They can be expressed in host cells and used to metabolize retinoic acid in an organism or cell, in drug screening, and to raise antibodies useful for inhibiting retinoic acid hydroxylation for the treatment of cancer, actinic keratosis, oral leukoplakia, secondary tumours of the head and/or neck, non-small cell lung carcinomas, basal cell carcinomas, acute promyelocytic leukaemia, skin cancer, and premalignancy associated with actinic
                                                                                                                                             This protein comprises a novel zebrafish retinoid metabolising protein, designated zP45CRAI. Its amino acid sequence was deduced from a cDNA clone (see ANV12203) isolated from a 6-18 hr embryo library. It includes a haem-binding motif characteristic of cytochrome P450 proteins. zP45ORAI is a retinoid oxidase that has the ability to hydroxylate retinoic acid at the 4 position of the beta-tonome ring, and is inducible in epithelial cells exposed to retinoic acid. Zebrafish, human and mouse P45ORAIs (see ANAV4159-61)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         01-OCT-1996;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence represents a human protein, designated PSEC64, which is related to neuron growth. The PSEC64 protein and its gene can be used for the development of a preventive agent for use in the treatment of diseases in which nerves are involved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 1;

                                                                                                                                                                                                                                                                                                                                        The present sequence represents a DWF4 polypeptide. The polypeptide is cytochrome P450 enzyme that mediates multiple steps in synthesis of brassinosteroids. Specifically, it mediates multiple 22alpha-hydroxylation steps in brassinosteroid biosynthesis. The DWF4 polynucleotide is used for altering the phenotype of a plant. DWF4 plants display a dramatic reduction in the length of different organs, and this size reduction is attributable to a defect in cell elongation. The DWF4 polynucleotides and polypeptides can be used in diagnostic assays and to generate antibodies, which can be used to produce

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Searched:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       on:
      pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
